Start here

Sign in first, then choose how your class will learn.

1 Open the teacher home

Open the link below. This guide covers Release 76. New features reach the hosted website after a separate administrator deployment.

2 Enter the teacher password

Sign in with your teacher password. Students do not need this password; they use the QR code for your class.

3 Choose a learning mode

Choose Vocabulary Practice or Word Race. Select the material and adjust the rules within that mode.

! Switch Japanese / English

In the gear menu, change Interface language. Japanese is the default. This preference is saved in the current browser.

Open Aomiyalingo (click)

Start Vocabulary Practice

Students work through short lessons at their own pace.

1 Choose Blue Sky, grade and unit

Check Elementary school / Blue Sky. Press Grade 5 or Grade 6, then choose from that grade's eight units. Check the word range and class name.

2 Check the rules and start

Use Change rules if needed. The default is six main questions per lesson. Review the settings and start the class.

3 Show this class QR code

Students scan it with their iPads and confirm their student number. They do not need to select a unit or learning mode.

! Monitor progress

Check answers, accuracy, hints and mistakes. Students can pause between short lessons. Review questions may be added.

Open Aomiyalingo (click)

Ten question types

Step-up learning combines word, sentence and listening tasks.

1 Word foundations: 3 types

Choose a meaning, listen and choose the English word, or spell with letter tiles. Tap a selected letter to return it.

2 Matching: 2 types

Match English words to meanings, or listen to audio and match it to the corresponding word or meaning.

3 Sentence work: 2 types

Put word tiles in order to build a sentence, or fill a gap in a sentence. Follow the instructions on screen.

! Listening production: 3 types

Order a sentence you hear, fill a listening gap, or type what you hear. Hint use is recorded for the teacher.

Open Aomiyalingo (click)

Prepare a Word Race

Students prepare in the lobby until you start the race.

1 Choose material and rules

In Word Race, choose Blue Sky, the grade and unit. Grade 6 starts with Pre Unit-Unit 1. Each mode remembers its last selection.

2 Open the lobby and show the QR

Press Open lobby. Students scan the QR, enter their student number and choose an animal avatar.

3 Check readiness, then start

Students press Ready after choosing their avatar. Check readiness on your screen, then start the race.

! Allow late joiners

Students can join while joining remains open. Use the joining control beside the QR. You do not need to restart the race.

Open Aomiyalingo (click)

During the race

Default: three courses, six minutes each, unlimited questions.

1 Follow each learner

View position, score, personal time remaining, answer count and current question type. Question order differs by student.

2 How scoring works

Correct answers and streaks earn points. Items can add effects or bonuses. There is no separate answer-speed bonus.

3 Pause, resume or end

Pause for an explanation or break, then resume. Use the adjacent End race button when you want to finish early.

! Review results, then continue

Check the top three after each course. The teacher starts the next course. After all courses, review the final results.

Open Aomiyalingo (click)

The three course stages

Default step-up format: four question types in each course.

1 Course 1: word foundations

Meaning choice, word matching, spelling and listening choice. Students begin with core vocabulary.

2 Course 2: build sentences

Sentence ordering, sentence gaps, audio matching and audio sentence ordering. Students work with sentences and sound.

3 Course 3: listen and produce

Sentence ordering, sentence gaps, audio gaps and dictation. The amount of support adapts to recent answers.

! Read the item effect on screen

An item roulette appears when an item arrives. Read the awarded item description and press its button when it is available.

Open Aomiyalingo (click)

Items 1: hints and recovery

Default: one item draw every six main answers. Use it before answering.

1 Hint Light

Removes one wrong choice or reveals the first spelling letter. Other tasks receive matching support. A correct answer with a hint earns 70 points by default.

2 Double Hint

Removes two wrong choices or reveals the first two spelling letters. Hinted answers are recorded separately from independent answers and earn 70 points by default.

3 Dash

Adds 40 points to each of the next two independent correct answers by default. A mistake or hinted answer does not consume a remaining boosted answer.

! Review Star

Retries a previously missed word for 60 points by default. It is drawn only when a missed word is available. Review answers do not build the main combo.

Open Aomiyalingo (click)

Items 2: bonuses and protection

Items can change game points; learning answers remain recorded.

1 Double Star

Doubles the base points of the next independent correct answer: an extra 100 points by default. It does not double the entire combo bonus.

2 Lucky Clover

Adds a random 20, 40, 60 or 80 points to the next independent correct answer. A mistake or hinted answer does not consume it.

3 Combo Shield

Prevents one combo reset caused by a mistake or hint. A wrong answer still earns zero points. Correctness and independent accuracy do not change.

! Swap Card

Replaces this question with another of the same type. Swapping alone does not change points, answer count, accuracy or combo.

Open Aomiyalingo (click)

Items 3: challenge and catch-up

Teachers choose which items are enabled in the race rules.

1 Treasure Challenge

After activation, three consecutive independent correct main answers earn 150 extra points. A mistake or hint resets progress to 0/3. Each activation pays out once.

2 Catch-up Magnet

Immediately adds 20-150 points based on the gap to the next higher score. Nobody loses points. If you have already overtaken that player, it grants 20 points.

3 Draws and course changes

Items are drawn every six main answers by default, with extra support weighted toward learners who need it. Active shields, treasure and other effects reset at the next course.

! Enable items and adjust scoring

Turn each of the ten items on or off in race rules. Base, hint, review and Dash points can be adjusted. Saved settings apply to newly created races.

What to tell students

You can read these instructions aloud before the game.

1 Check your own number

"Scan the QR and enter your own student number. Check it carefully before joining. Do not use another student's number."

2 Choose an animal and get ready

"Choose an animal and press Ready. While you wait, read the material, question and item information on your screen."

3 You may use the textbook

"You may look at the textbook for this unit. Think carefully. Correct answers and streaks earn points; items can help too."

! Stay on this screen when done

"When time is up, you can review while waiting. I will start the next course. Keep this screen open."

Open Aomiyalingo (click)

Results, reset and deletion

Resetting a race and deleting its records are different actions.

1 Review and export results

Practice and race records are managed separately. Review answers, errors and hints. Export results as CSV when needed.

2 Reset or prepare a new race

Use Reset race during a race, or Prepare a new race after it ends. Both return to setup and keep the existing results.

3 Move unwanted records to the bin

Check the target in the confirmation dialog. Finished races and other supported records can be moved to the recycle bin and restored.

! Permanent deletion cannot be undone

In the race recycle bin, delete one entry permanently or empty the bin. Save any results you need before confirming.

Open Aomiyalingo (click)

Material and device settings

Teaching rules and this browser's display settings are separate.

1 Edit material within each mode

Open the vocabulary/practice settings or vocabulary/game settings in the relevant mode. Save your changes before closing.

2 Use changes in a new session

An existing class or race keeps the settings captured when it was created. Prepare a new class or race to use the edited settings.

3 Use the gear for sound and display

Adjust volume, text size, clearer outlines, reduced motion and interface language. Preferences are stored in this browser.

! Music is for teacher screens only

Teacher music defaults to 20% volume. Student QR pages do not play background music. A first click may be needed to enable audio.

Open Aomiyalingo (click)

Content check and backups

Open the gear menu, then Status, to find these tools.

1 Check content before teaching

Find missing pictures or audio and flagged choice/sentence issues. Teachers should also check meaning and natural wording themselves.

2 Save teaching settings as JSON

Backup & restore exports materials, examples, rules and referenced custom audio. It does not include student results or passwords.

3 Preview before restoring

Select a JSON backup, check its material/audio counts, then confirm restore. The previous settings are saved and can be downloaded.

! Keep results and app files separately

Export results as CSV. Built-in media are included in the complete project, not the teaching JSON. The hosted app needs internet access.

Open Aomiyalingo (click)

Check for updates

Teacher only: gear menu > Status > Check for updates.

1 Compare this page with GitHub

The server checks the public GitHub version. View this page's version, the public version and the last check time. No teacher GitHub account is needed.

2 Load a newly deployed version

When this server has a newer version, an Update button appears. End active lessons or races and confirm that all work is saved before pressing it.

3 If only GitHub has a newer version

The panel says deployment is pending. An administrator must publish it to the server. This button does not automatically deploy GitHub source.

! If checking fails or says development

A connection failure means the latest version is unverified. Check the network and retry. A local version newer than the public release is labelled a development version.

Open Aomiyalingo (click)

Before class and troubleshooting

Both the teacher computer and student iPads need internet.

1 Show your screen on the TV

Use the built-in Windows Cast feature. Use Edge or Chrome on the teacher PC and Safari on iPads. No extra student app is needed.

2 If the connection fails

Check Wi-Fi and retry without closing the page. Reopen in the same browser on the same iPad. Do not clear the website data.

3 Test with one iPad before class

Check teacher login, TV display and QR joining. Play audio, answer two questions and confirm that the teacher screen updates.

! Available teaching material

Elementary Blue Sky: Grade 5 Units 1-8 and Grade 6 Pre Unit-Unit 1 through Unit 8. Earlier classes and races retain their original material and rules.
